

# Gram Training Center

## Course Description

### ATEX Process Ventilation

**Purpose:** Baseline of the course are the relevant parts of the ATEX-directive, which are connected to the practical construction, installation and documentation of components and installations for process ventilation.

**Participants:** The course is made for engineers, sales technicians, project managers and others, who wants an overall understanding of the influence of the ATEX-directive on installations for process ventilation.

**Content:** *The course ATEX process ventilation is based on a run-through of the most important parts of the ATEX-directive, which are related to the practical dimensioning of process ventilation installations.*

*The demands for the total installation as well for the dimensioning, choice and positioning of installations will be discussed.*

*We will focus on necessary security components and how to choose them, but also on the influence of a given choice on the practical installation.*

*For the single components we will go through the necessary documentation needed for a correct delivery.*

*There will be a practical demonstration of security components in the Gram Training Center.*

**Dates:** As required

**Duration:** Approximately 4 hours plus lunch and eventually a tour through the production units

**Course fee:** None (lunch included)

**Place:** All courses are held at Gram Training Center, Lysbjergvej 10, Hammelev, DK-6500 Vojens

**Registration:** Please contact our Sales department under [sales@vaagram.dk](mailto:sales@vaagram.dk)
